

SUBSCRIBER-ONLY MONEY PLAY

TOP 5 GITHUB APPS

How these open-source tools could become paid implementation, support, training, or managed-service opportunities.

5 GITHUB APPS WORTH WATCHING THIS WEEK

Hermes • OpenCut • OmniRoute
DeepTutor • OfficeCLI

LUX APP REVIEW • AUTOMATED GITHUB APP INTELLIGENCE

1	Hermes Agent	92
2	OpenCut	88
3	OmniRoute	87
4	DeepTutor	86
5	OfficeCLI	84

Pricing examples are educational planning scenarios. They are not earnings guarantees, and every offer requires license, security, privacy, capability, and market validation.

THE FIVE MONEY PLAYS

Do not sell code you do not own. Sell the evaluation, implementation, configuration, integration, training, operation, support, reporting, and measurable outcome.

Hermes Agent

Managed AI Operations Desk

Sample setup: \$3,500 • Sample monthly: \$999

Primary buyer

Small businesses, agencies, creators, and internal operations teams

Subscriber play

Install and configure Hermes, connect approved channels and tools, build three business skills, add scheduled reporting, document permissions, and provide managed monitoring.

OpenCut

Private Creator Editing Studio

Sample setup: \$1,500 • Sample monthly: \$399

Primary buyer

Creators, schools, nonprofits, agencies, and privacy-sensitive media teams

Subscriber play

Deploy a branded private editing workspace, prepare templates, train the team, document storage and export workflows, and provide monthly support.

OmniRoute

AI Cost-Control and Reliability Gateway

Sample setup: \$1,997 • Sample monthly: \$499

Primary buyer

AI agencies, development teams, internal innovation groups, and multi-model operators

Subscriber play

Install a hardened gateway, connect approved providers, configure routing and fallbacks, add budgets and logs, train staff, and provide a monthly optimization report.

DeepTutor

Private AI Learning Portal

Sample setup: \$2,500 • Sample monthly: \$599

Primary buyer

Tutoring companies, workforce programs, schools, nonprofits, and membership communities

Subscriber play

Deploy a private tutoring portal, load approved learning materials, configure learner roles, train educators, add review controls, and provide monthly curriculum and usage reporting.

OfficeCLI

Document Automation QuickStart

Sample setup: \$1,250 • Sample monthly: \$349

Primary buyer

Consultants, agencies, finance teams, operations groups, and software vendors

Subscriber play

Install OfficeCLI, connect approved agents, build three document workflows, create quality checks, document templates, and provide managed maintenance.

Hermes Agent: Managed AI Operations Desk

Primary buyer: Small businesses, agencies, creators, and internal operations teams

Commercial opportunity

Install and configure Hermes, connect approved channels and tools, build three business skills, add scheduled reporting, document permissions, and provide managed monitoring.

Problem-to-profit map

Customer problem	App capability	Paid deliverable
Team lacks time or expertise	Documented project capabilities	Configured and tested system
Unclear permissions and risk	Review, least privilege, logging	Security and deployment checklist
Inconsistent adoption	Training, templates, SOPs	Repeatable staff workflow
Ongoing changes	Releases, maintenance, monitoring	Monthly support and optimization report

Sample offer ladder

Package	Price	Deliverables
Starter	\$1,575 one-time	Discovery, test install, baseline report, and one working workflow.
Growth	\$3,500 one-time	Configured implementation, three approved workflows, team training, documentation, and handoff.
Managed	\$999/month	Updates, monitoring, reporting, support, and quarterly optimization.

Pilot-first controls

- Verify the exact license and attribution requirements.
- Use a controlled environment and non-sensitive test data.
- Document credentials, permissions, logs, backup, and rollback.
- Define acceptance criteria and what the tool cannot guarantee.
- Obtain customer approval before production deployment.

OpenCut: Private Creator Editing Studio

Primary buyer: Creators, schools, nonprofits, agencies, and privacy-sensitive media teams

Commercial opportunity

Deploy a branded private editing workspace, prepare templates, train the team, document storage and export workflows, and provide monthly support.

Problem-to-profit map

Customer problem	App capability	Paid deliverable
Team lacks time or expertise	Documented project capabilities	Configured and tested system
Unclear permissions and risk	Review, least privilege, logging	Security and deployment checklist
Inconsistent adoption	Training, templates, SOPs	Repeatable staff workflow
Ongoing changes	Releases, maintenance, monitoring	Monthly support and optimization report

Sample offer ladder

Package	Price	Deliverables
Starter	\$750 one-time	Discovery, test install, baseline report, and one working workflow.
Growth	\$1,500 one-time	Configured implementation, three approved workflows, team training, documentation, and handoff.
Managed	\$399/month	Updates, monitoring, reporting, support, and quarterly optimization.

Pilot-first controls

- Verify the exact license and attribution requirements.
- Use a controlled environment and non-sensitive test data.
- Document credentials, permissions, logs, backup, and rollback.
- Define acceptance criteria and what the tool cannot guarantee.
- Obtain customer approval before production deployment.

OmniRoute: AI Cost-Control and Reliability Gateway

Primary buyer: AI agencies, development teams, internal innovation groups, and multi-model operators

Commercial opportunity

Install a hardened gateway, connect approved providers, configure routing and fallbacks, add budgets and logs, train staff, and provide a monthly optimization report.

Problem-to-profit map

Customer problem	App capability	Paid deliverable
Team lacks time or expertise	Documented project capabilities	Configured and tested system
Unclear permissions and risk	Review, least privilege, logging	Security and deployment checklist
Inconsistent adoption	Training, templates, SOPs	Repeatable staff workflow
Ongoing changes	Releases, maintenance, monitoring	Monthly support and optimization report

Sample offer ladder

Package	Price	Deliverables
Starter	\$898 one-time	Discovery, test install, baseline report, and one working workflow.
Growth	\$1,997 one-time	Configured implementation, three approved workflows, team training, documentation, and handoff.
Managed	\$499/month	Updates, monitoring, reporting, support, and quarterly optimization.

Pilot-first controls

- Verify the exact license and attribution requirements.
- Use a controlled environment and non-sensitive test data.
- Document credentials, permissions, logs, backup, and rollback.
- Define acceptance criteria and what the tool cannot guarantee.
- Obtain customer approval before production deployment.

DeepTutor: Private AI Learning Portal

Primary buyer: Tutoring companies, workforce programs, schools, nonprofits, and membership communities

Commercial opportunity

Deploy a private tutoring portal, load approved learning materials, configure learner roles, train educators, add review controls, and provide monthly curriculum and usage reporting.

Problem-to-profit map

Customer problem	App capability	Paid deliverable
Team lacks time or expertise	Documented project capabilities	Configured and tested system
Unclear permissions and risk	Review, least privilege, logging	Security and deployment checklist
Inconsistent adoption	Training, templates, SOPs	Repeatable staff workflow
Ongoing changes	Releases, maintenance, monitoring	Monthly support and optimization report

Sample offer ladder

Package	Price	Deliverables
Starter	\$1,125 one-time	Discovery, test install, baseline report, and one working workflow.
Growth	\$2,500 one-time	Configured implementation, three approved workflows, team training, documentation, and handoff.
Managed	\$599/month	Updates, monitoring, reporting, support, and quarterly optimization.

Pilot-first controls

- Verify the exact license and attribution requirements.
- Use a controlled environment and non-sensitive test data.
- Document credentials, permissions, logs, backup, and rollback.
- Define acceptance criteria and what the tool cannot guarantee.
- Obtain customer approval before production deployment.

OfficeCLI: Document Automation QuickStart

Primary buyer: Consultants, agencies, finance teams, operations groups, and software vendors

Commercial opportunity

Install OfficeCLI, connect approved agents, build three document workflows, create quality checks, document templates, and provide managed maintenance.

Problem-to-profit map

Customer problem	App capability	Paid deliverable
Team lacks time or expertise	Documented project capabilities	Configured and tested system
Unclear permissions and risk	Review, least privilege, logging	Security and deployment checklist
Inconsistent adoption	Training, templates, SOPs	Repeatable staff workflow
Ongoing changes	Releases, maintenance, monitoring	Monthly support and optimization report

Sample offer ladder

Package	Price	Deliverables
Starter	\$750 one-time	Discovery, test install, baseline report, and one working workflow.
Growth	\$1,250 one-time	Configured implementation, three approved workflows, team training, documentation, and handoff.
Managed	\$349/month	Updates, monitoring, reporting, support, and quarterly optimization.

Pilot-first controls

- Verify the exact license and attribution requirements.
- Use a controlled environment and non-sensitive test data.
- Document credentials, permissions, logs, backup, and rollback.
- Define acceptance criteria and what the tool cannot guarantee.
- Obtain customer approval before production deployment.

SAMPLE REVENUE SCENARIOS

The math below illustrates one-time setup plus recurring support. It does not predict demand, close rates, profit, or retention.

Scenario	Setup clients	Avg setup	Subscribers	Avg monthly	First month	MRR
Conservative	2	\$2,149	3	\$569	\$6,006	\$1,707
Target	5	\$2,149	8	\$569	\$15,299	\$4,552
Stretch	10	\$2,149	15	\$569	\$30,029	\$8,535

Formula

First-month revenue = setup clients x average setup price + subscribers x average monthly price. MRR = subscribers x average monthly price. Expenses, taxes, refunds, sales time, support, churn, and implementation costs are not included.

COPY-AND-PASTE AGENT SCRIPT

LUX APP REVIEW MONEY PLAY AGENT PROMPT

ROLE
You are the Lux Revenue Architect. Analyze one reviewed open-source application and create an evidence-based business implementation plan.

INPUTS
APP_NAME: {{APP_NAME}}
REPOSITORY_URL: {{REPOSITORY_URL}}
OFFICIAL_WEBSITE: {{OFFICIAL_WEBSITE}}
LUX_REVIEW_DATA: {{PASTE_REVIEW_JSON}}
TARGET_BUYER: {{TARGET_BUYER}}
CURRENCY: USD

RULES
1. Do not invent features, security claims, users, revenue, integrations, or customer results.
2. Separate verified facts, reasonable inferences, and ideas to test.
3. Review the license before recommending resale, modification, redistribution, hosting, or white labeling.
4. Sell implementation, configuration, integration, operation, support, reporting, training, or measurable outcomes—not ownership of code the seller does not own.
5. Treat all prices and revenue scenarios as editable educational examples, not earnings guarantees.
6. Include privacy, permissions, credential handling, maintenance, support burden, and rollback controls.

OUTPUT
A. One-sentence opportunity
B. Problem -> app capability -> paid outcome map
C. Three buyer profiles
D. Five monetization options
E. Starter, Growth, and Agency package ladder
F. Conservative, target, and stretch revenue scenarios with formulas
G. Seven-day pilot and 30-day launch plan
H. Landing page, 60-second pitch, cold email, DM, discovery questions, objections, CTA
I. Delivery SOP
J. License, security, privacy, maintenance, support, and vendor-risk assessment
K. Verdict: BUILD THE OFFER, PILOT FIRST, WATCHLIST, or DO NOT COMMERCIALIZE YET
L. Subscriber teaser that reveals value without exposing the full playbook
M. Fact-check table and missing-evidence list

7-DAY PILOT

- Day 1: confirm buyer, scope, app, limits, price, and acceptance criteria.
- Day 2: verify repository identity, license, maintenance, dependencies, and data handling.
- Day 3: build a test deployment with least privilege, logs, backups, and rollback.
- Day 4: complete one defined workflow using test data.
- Day 5: deliver findings, screenshots, limitations, and recommendations.
- Day 6: train the buyer and capture acceptance or unresolved items.
- Day 7: decide whether to expand, manage monthly, revise, or stop.

30-DAY LAUNCH

- Week 1: validate the niche and interview five potential buyers.
- Week 2: deliver two controlled pilots and improve the checklist.
- Week 3: publish a case study, landing page, and clear package ladder.
- Week 4: convert repeatable work into managed support and monthly reporting.

SAMPLE OUTREACH

Subject: A practical way to implement an open-source tool safely

Hi {{NAME}}, I reviewed {{APP_NAME}} and built a small implementation offer around the problem it solves. The pilot includes a controlled setup, documented permissions, one working workflow, a plain-English report, and a rollback plan. If the tool is not a fit, the report will say so. Would it be useful to review the one-page scope together?

FINAL CONTROL

Every commercial recommendation requires human approval. Confirm the app still works, the license permits the proposed activity, the buyer has a real problem, the price matches delivery effort, and the system can be supported safely.
